Introduction

Bangladesh is a disaster prone country. In particular, the coastal region in the south-western part of the country is often affected by cyclone, tidal surge, water logging and salinity intrusion. These hazards cause damage to life, asset and environment; disrupt life and livelihood and force affected communities in serious distresses. Recovering from such situations require humanitarian assistance.

The institutional knowledge and information on disaster risk enhances community's disaster management capacities. It helps communities reduce their disaster risks to a great extant.

This pocket book from PROSHAR brings some institutional knowledge and information together. This will help enhance disaster management capacities of the communities in south-western region of the country.

Introduction

Apply own capability; make progress in disaster risk reduction

Consider cyclone season in cultivation; Reduce crop losses
